

NEWHAVEN ESTATE

Nicholson Road
Forestdale, Western Australia

DESIGNED BY - EMERGE

Environmental conservation and the protection of the habitat during construction was of a primary concern on this project. In order to capitalize on the existing landform and the retention of the mature pine and melaleuca trees, construction crews were required to tread softly on the existing landscape.

Many sustainable initiatives have been incorporated into the parklands, including water sensitive drainage, the use of renewable resources and soil preparation to aid water conservation.

This has resulted in large areas of passive POS, pvc lined lakes with ample viewing nodes and tree lined street frontages.
